The style reflects the need for practice-based teaching with a modern edge in daily clinical routine; accordingly, it also employs online material and pocket cards. Each chapter begins with specific learning objectives, which are cross-referenced with the European curriculum for undergraduate medical education released by the European Union of Medical Specialists (UEMS) together with the European Union Geriatric Medicine Society (EUGMS), as well as the minimum geriatric competences for medical students established by the American Geriatrics Society (AGS). World-renowned European experts in practicing and teaching the interdisciplinary field of Geriatrics contributed to this work, with the aim of offering the new generation of health professionals a global perspective on one of the greatest public health challenges of our time: the management of the steadily increasing number of older, multimorbid, and vulnerable persons. The major strength of this book – published under the auspices of the EUGMS – is its pragmatic, goal-oriented approach, which makes it suitable for bedside learning and patient-centered medicine; further, all of the chapters are firmly based on the pillars of the ageing process in all of its biological aspects, helping readers understand the pathophysiology of and rationale behind interventions for the main geriatric syndromes and disorders.

Pathy's Principles and Practice of Geriatric Medicine

Geriatric medicine is one of the youngest medical specialities in Australia but is also one of the fastest growing. Geriatric medicine offers a more holistic approach to patient care than organ-based internal-medicine sub-specialities. Patient-centred interventions aim to allow the patient to function optimally. This textbook has been designed to inspire and inform students of geriatric medicine about the science and art of aged care. The book is structured to follow how geriatric-medicine clinicians approach patients who present with geriatric syndromes and must be assisted by systems of care. In an introductory part, overviews are provided of the biology of ageing, comprehensive geriatric assessment (the cornerstone of geriatric-medicine practice), multidisciplinary teamwork, and community services for older people in Australia. In the second part of the book, over 13 chapters, detailed coverage is provided of the geriatric syndromes, the so-called 'geriatric giants', immobility, incontinence, instability, and impaired intellect. In the third part of the book, over 10 chapters, 'Care in context' - care of older people in general practice and in residential aged care facilities, rehabilitation, acute and post-acute care, end-of-life issues, legal aspects of geriatric medicine, for example - is the focus; geriatric medicine is placed within the Australian health-care system. Individual chapters are written by specialist contributors. Case studies illustrate key points about assessment and management. Inclusion of three poems, by H W Longfellow, W B Yeats, and Dylan Thomas, will enable readers to 'feel the heart within geriatric medicine'. Australasian medical students, junior hospital doctors working in geriatric medicine, and other members of aged-care teams (specialist nurses, physiotherapists, occupational therapists, social workers, etc.), will find in this book a succinct, readable, and authoritative introduction to the principles and practice of geriatric medicine.
