2021 International Residential Code, Loose-Leaf Version

The International Residential Code (IRC) establishes minimum requirements for one- and two-family dwellings and townhouses using prescriptive provisions. It's founded on broad-based principles that make possible the use of new materials and new building designs. This 2021 edition is fully compatible with all of the International Codes (I-Codes) published by the International Code Council (ICC), including the International Building Code, International Energy Conservation Code, International Existing Building Code, International Fire Code, International Fuel Gas Code, International Green Construction Code, International Mechanical Code, International Plumbing Code, International Private Sewage Disposal Code, International Property Maintenance Code, International Swimming Pool and Spa Code, International Wildland-Urban Interface Code, International Zoning Code, and International Code Council Performance Code.

Mastering code compliance has never been so easy! The 2015 INTERNATIONAL PLUMBING CODE COMMENTARY will take readers on a journey through the newly updated 2015 International Plumbing Code (IPC), stopping along the way for insightful commentaries that explore both the rationale for, and the practical implications of, the code. Its strategy is simple: give readers the basic technical requirements, and then reinforce that content by discussing the regulations in a real-world context. Coverage includes the historical background for the code, effective methods for applying it, and potential consequences when it is not followed. This unique resource can provide the solid working knowledge that is so critical to professionals in a variety of positions, from code officials and construction workers to building contractors and plumbers.

2015 International Plumbing Code Commentary (Includes Ipsdc)

The IPC provides minimum regulations for plumbing facilities in terms of both performance and prescriptive objectives, and provides for the acceptance of new and innovative products, materials, and systems. Important changes include: Updated table for the Minimum Number of Required Plumbing Fixtures. Single-user toilet facilities (a room having a single water closet and a single lavatory) are not required to be labeled for use by only a male or female (separated use designations). Solar thermal water heating systems need to conform to the ICC 900/SRCC 300 standard. Well systems are required to comply with standard NGWA-01 where local requirements do not cover subject matter or are lacking in detail on others.

PREFACE Significant changes in the plumbing industry, as well as in manufacturing technology, had become so commanding that a radically new approach to the design and installation of plumbing systems seemed an imperative. The reply to that imperative was the International Plumbing Code, a document emphasizing prescriptive and performance-related provisions. As a follow-up to the International Plumbing Code, we offer a companion document, the International Plumbing Code Commentary. The basic appeal of the Commentary is thus: it provides in a small package and at reasonable cost thorough coverage of many issues likely to be dealt with when using the International Plumbing Code — and then supplements that coverage with historical and technical background. Reference lists, information sources and bibliographies are also included. Throughout all Of this, strenuous effort has been made to keep the vast quantity of material accessible and its method of presentation useful. With a comprehensive yet concise summary of each section, the Commentary provides a convenient reference for plumbing regulations. In the chapters that follow, discussions focus on the full meaning and implications of the code text. Guidelines suggest the most effective method of application, and the consequences of not adhering to the code text. Illustrations are provided to aid understanding; they do not necessarily illustrate the only methods of achieving code compliance. The format of the Commentary includes the full text of each section, table and figure in the code, followed immediately by the commentary applicable to that text. Each section's narrative includes a statement of its objective and intent, and usually includes a discussion about why the requirement commands the conditions set forth. Code text and commentary text are easily distinguished from each other. All code text is shown as it appears in the International Plumbing Code, and all commentary is indented below the code text and begins with the symbol +. Readers should note that the Commentary is to be used in conjunction with the International Plumbing Code and not as a substitute for the code. The Commentary is advisory only; the code official alone possesses the authority and responsibility for interpreting the code.

International Plumbing Code

The 2021 IPC provides minimum regulations for plumbing facilities and provides for the acceptance of new and innovative products, materials, and systems. In October 2019, the Code Council released an independent study comparing model plumbing codes. It found that over a 12-year period, counties using the IPC saved \$38 billion in construction costs, emitted 1,000,000 fewer tons of carbon dioxide, saw an additional 166,000 jobs, and saved 880 million feet of pipe. On average, a single-family home could save up to \$4,000 in labor, materials and overhead compared to that same home built to other codes. Important changes in the 2021 IPC include: Multiple-user toilet facilities to serve all genders are now permitted. Two new methods for relining/rehabilitation of existing sewers are added. Accommodations for mounted roof top solar panels over vent terminals is added. CSA B805/ICC 805 Rainwater Harvesting Systems is allowed as an alternative design method. Plumbing provisions from ICC A117.1-2017 Standard for Usable and Accessible Buildings and Facilities are now included.
