Cell cycle

The Cell Cycle and its Regulation - The Cell Cycle and its Regulation by Professor Dave Explains 388,649 views 6 years ago 12 minutes, 40 seconds - Your **cells**, have to **divide**, when you're growing, to heal wounds, and to replace dead **cells**,. But how do **cells**, know when to **divide**, ...

Intro

different species have different numbers of chromosomes

sister chromatids are attached at something called the centromere

sister chromatids separate during cell division (mitosis)

Stages of the Cell Cycle M Phase (mitotic phase) the cell is dividing

What controls the cell cycle?

the cell cycle is regulated on the molecular level

Cell Cycle Signaling Molecules

phosphorylation the transfer of a phosphate group between molecules

cyclin-dependent kinase (CDK)

the kinases return to an inactive state until the next time around the cell cycle

The Cell Cycle Control System ensures chromosomes are attached to spindles

density-dependent inhibition relies on contact between surface proteins of adjacent cells

PROFESSOR DAVE EXPLAINS

Cell Cycle | Overview - Cell Cycle | Overview by Hussain Biology 406,948 views 3 years ago 5 minutes, 38 seconds - The **cell cycle**., or **cell,-division cycle**., is the series of events that take place in a **cell**, that cause it to **divide**, into two daughter **cells**.,

Cell Cycle \u0026 MITOSIS: A-level Biology. Prophase, Metaphase, Anaphase and Telophase - Cell Cycle \u0026 MITOSIS: A-level Biology. Prophase, Metaphase, Anaphase and Telophase by Miss Estruch 92,016 views 3 years ago 11 minutes, 19 seconds - Learn the stages of mitosis and the **cell cycle**.. Download my **FREE GUIDE**, - How to analyse your tests to skyrocket your grade!

CELL CYCLE \u0026 MITOSIS

CELL DIVISION Eukaryotic cells enter the **cell cycle**, ...

MITOSIS Mitosis has four key stages: Prophase Metaphase Anaphase Telophase.

PROPHASE In this stage the chromosomes condense and become visible. In animal cells, the centrioles separate and move to opposite poles of the cell The centrioles are responsible for Creating spindle fibres which are released from both poles to create a spinde apparatus - these wil attach to the centromere and chromatids on the chromosome in later stages. Plants have a spinde apparatus, but lack the centrioles.

METAPHASE The chromosomes align along the equator of cell. The spindle fibres released from the poles now attach to the centromere and chromatid.

TELOPHASE The chromosomes are now at each pole of the cell and become longer and thinner again. The spindle fibres disintegrate, and the nucleus starts to reform. The final stage in the cell cycle is when the cytoplasm splits in two to create the two new genetically identical cells.

MITOTIC INDEX The mitotic index can be calculated by counting how many cells are visible in the filed of view and the number of cells visible that are in a stage of mitosis.

GCSE Biology Revision \"Eukaryotes and Prokaryotes\" - GCSE Biology Revision \"Eukaryotes and Prokaryotes\" by Freesciencelessons 1,544,820 views 6 years ago 2 minutes, 41 seconds - In this video, we look at the differences and similarities between eukaryotic **cells**, such as animal and plant **cells**., and prokaryotic ...
