Avoiding the False Negative

The purpose of this qualitative study was to examine the perceptions that students and advisors/administrators had regarding the mathematics placement process at a two-year branch campus of a large urban, mid-western university. Participants in the study were 20 advisors/administrators and 15 students. Qualitative data were collected from face-to-face, semi-structured interviews and focus groups, placement test observations, and placement test documents. The student participants were students who had taken the Compass/ESL® computer-adaptive math placement test and successfully completed a college level math course at the institution, as well as students who had just recently taken the test. The advisors/administrators all had some level of involvement in the mathematics placement process at the institution. Therefore, this research offered a unique opportunity to focus on the current mathematics placement process. The results suggested that students want and need an opportunity to practice before they take the test. This may encourage them to take the test more seriously. Furthermore, the use of an entrepreneurial placement testing system should require that the recommendations made by them as to the procedures for administering the test be followed. Finally, the institution is interested in implementing mandatory placement in mathematics. This would include a well-defined mathematics placement appeal process for students who believe they are not correctly placed by the test, as well as the use of multiple measures to determine the placement of students in a mathematics course.

Chronicle Four-Year College Databook

An in-depth look at academically selective public high schools in America What is the best education for exceptionally able and high-achieving youngsters? Can the United States strengthen its future intellectual leadership, economic vitality, and scientific prowess without sacrificing equal opportunity? There are no easy answers but, as Chester Finn and Jessica Hockett show, for more than 100,000 students each year, the solution is to enroll in an academically selective public high school. Exam Schools is the first-ever close-up look at this small, sometimes controversial, yet crucial segment of American public education. This groundbreaking book discusses how these schools work--and their critical role in nurturing the country's brightest students. The 165 schools identified by Finn and Hockett are located in thirty states, plus the District of Columbia. While some are world renowned, such as Boston Latin and Bronx Science, others are known only in their own communities. The authors survey the schools on issues ranging from admissions and student diversity to teacher selection. They probe sources of political support, curriculum, instructional styles, educational effectiveness, and institutional autonomy. Some of their findings are surprising: Los Angeles, for example, has no "exam schools" while New York City has dozens. Asian-American students are overrepresented—but so are African-American pupils. Culminating with in-depth profiles of eleven exam schools and thoughtful reflection on policy implications, Finn and Hockett ultimately consider whether the country would be better off with more such schools. At a time of keen attention to the faltering education system, Exam Schools sheds positive light on a group of schools that could well provide a transformative roadmap for many of America's children.
