Digital Blood Pressure monitor calibration at home - Digital Blood Pressure monitor calibration at home by minaedwar 19,157 views 1 year ago 4 minutes, 50 seconds - Digital Blood Pressure monitor calibration at home using a Mercury Sphygmomanometer. Connecting the two devices in parallel ...

How to Calibrate/Verify your digital blood pressure monitor at home Using a Mercury Sphygmomanometer Digital blood pressure monitors use electronic sensors to read pressure which makes their reading prone to error from changing ambient conditions like temperature, or battery running out

Classic Mercury Sphygmomanometers are most accurate and need no calibration since they are simply a ruler reading a mercury column length in millimeters

Mercury Sphygmomanometers might only require simple maintenance by replacing Mercury and cleaning the tube if it gets too dirty with Mercury Oxide

Making them reference devices for calibrating and verifying digital or aneroid (pointer/dial) sphygmomanometers

Attention! This is not a medical procedure This is a common engineering practice of sensor calibration/verification

The concept is: since the BPM has pumping capability it replaces the manual pump connected in parallel to Mercury column making them both read the same pressure in one cuff

If the Mercury column length instantaneous reading is perfectly equal to Digital BPM reading up and down then it is correct

If there is a linear (constant) difference, you may add to/subtract from BPM reading

If there is a logarithmic (multiplier) difference you can graph the results from both devices and deduce an equation If you're a math Jedi

But I strongly recommend replacing the batteries then asking for maintenance service if the BPM is not perfectly fine

Attention! This part is a medical thesis

Since Mercury sphygmomanometer (combined with a stethoscope) uses a different principle from Digital BPM It's perfectly fine to have reading (Systolic/Diastolic, not instantaneous pressure) differences

Mercury reading uses the upper/lower range of hearing Korotkoff sounds (pulse) as the Systolic/Diastolic readings Subject to measuring person hearing capability and stethoscope

While Digital BPM (Oscillatory device) work on reading the vibrations in the arterial wall on the range between Systolic and Diastolic pressures, subject to correct cuff positioning and sensor

These medical considerations are unrelated to sensor accurate readings verified by the procedure explained here I would have wrapped the cuff around a metal pole if it wasn't for pulse error messages

But since this a medical device, it is not made to measure instantaneous cuff pressure with nothing alive in it
Best Blood Pressure Monitor (Doctor's Review) - Best Blood Pressure Monitor (Doctor's Review) by Cajun Koi Academy 392,403 views 4 years ago 7 minutes, 21 seconds - In this video I review two of my favorite blood pressure monitors at this time. Blood pressure control nowadays is so much easier ...
