Handbook of Principles of Organizational Behavior

There is a strong movement today in management to encourage management practices based on research evidence. In the first volume of this handbook, I asked experts in 39 areas of management to identify a central principle that summarized and integrated the core findings from their specialty area and then to explain this principle and give real business examples of the principle in action. I asked them to write in non-technical terms, e.g., without a lot of statistics, and almost all did so. The previous handbook proved to be quite popular, so I was asked to edit a second edition. This new edition has been expanded to 33 topics, and there are some new authors for the previously included topics. The new edition also includes: updated case examples, updated references and practical exercises at the end of each chapter. It also includes a preface on evidence-based management. The principles for the first edition were intended to be relatively timeless, so it is no surprise that most of the principles are the same (though some chapter titles include more than one principle). This book could serve as a textbook in advanced undergraduate and in MBA courses. It could also be of use to practicing managers and not just those in Human Resource departments. Every practicing manager may not want to read the whole book, but I am willing to guarantee that every one will find at least one or more chapters that will be practically useful. In this time of economic crisis, the need for effective management practices is more acute than ever.

In clear and accessible language, the authors provide critical analysis of important elements in understanding organisational behaviour rarely addressed in detail in more conventional textbooks, including knowledge and power, rationality, ideology and self, boundary, efficiency and decision-making.

Transforming Health Care Through Information: Case Studies

Work-related factors have implications for health and wellbeing. Due to the amount of time spent at the workplace and the impact of work on health over an individual's life course, the workplace has evolved as an important arena for population health promotion. Risk factors within the physical and psychosocial working environment, as well as inadequate organizational support, are associated with increasing work-related health problems, which result in psychosocial and economic implications for the individual, the family, the organization and the society. Recent estimates revealed an increasing level of sickness absence due to work related factors, among others. In recognition of the importance of worker health and a healthy working life, but also in line with numerous occupational health goals, many organisations set aside significant amounts of financial resources annually to promote work well-being. However, studies have shown that despite this positive disposition among employers, both employee participation and the impact of such programs remain minimal. According to the Ottawa declaration for health promotion and the Luxembourg declaration for Workplace Health Promotion (WHP), WHP should be strategic. It is recommended that WHP be conducted in a systematic and continuous process of needs analysis, priority setting, planning, implementation and evaluation. Unfortunately, available studies show that many companies have policies currently in place but lack knowledge regarding proper implementation and evaluation. The foregoing phenomenon raises questions regarding the level of knowledge of and attitudes towards WHP among people in management positions. This Research Topic aims to address factors affecting workplace health promotion. - What does WHP mean for employers? - What forms of WHP packages exist? - Is there evaluation and follow up of such interventions? - What are the barriers and facilitators relating to the uptake of WHP interventions among employees? - Do people in relevant managerial positions possess adequate knowledge regarding WHP? Manuscripts that explore factors crucial for WHP, including individual and organizational level factors, crucial for WHP are welcomed. Manuscripts on barriers, evidence-based interventions, best practices, analysis of existing policy documents and those with a life course perspective etc. are also welcomed. Manuscripts can be of national, international and global perspectives.
